Broadcast Name	enable

#### Attached Devices

### ROUTER STATUS HELP

This screen shows your current settings and statistics for your Router. This will be the first page all customer service calls will start.

Sky has set all the settings for you to enable the router to work straight away without further configuration. However, if something needs to be changed, you'll have to change it on the relevant page.

Please note that according to the Router mode some items may not be displayed.

**Firmware Version:** This is the current software the Router is using.

**Modem:** The current Modem status and settings are shown in this section.

- **ADSL Firmware Version** - This is the version number of the low-level ADSL firmware. This is contained within the Router Firmware.
- **Modem Status** - the current state of the WAN connection to your provider.
- **DownStream Connection Speed** - the connection speed of the WAN connection from the provider to your Router.
- **UpStream Connection Speed** - the connection speed of the WAN connection from your Router to the provider.
- **VPI** - the VPI setting configured automatically by Sky.
- **VCI** - the VCI setting configured automatically by Sky.
